

Using Unified Analytics to Solve Complex Clinical Challenges

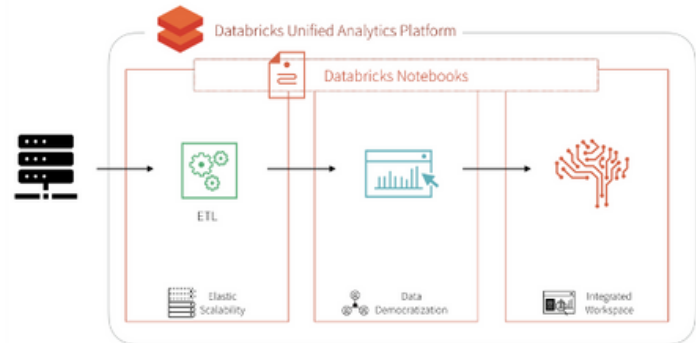

Healthcare organizations are struggling to innovate. Unified analytics on an agile, cloud-based architecture with pre-built healthcare accelerators can help liberate your organization by solving today's problems while also preparing you for tomorrow's needs.

The volume of healthcare data is growing at a staggering rate, many organizations have **antiquated IT infrastructure**, **data sources and teams are siloed**, and regulatory standards such as HIPAA require **stringent security safeguards** to protect patient data. This leaves healthcare organizations frequently recreating the wheel, facing BI project timelines that are regularly measured in months, or years and struggling just to meet current needs, much less thinking about the future.

Databricks - Unified Analytics at Scale

Databricks provides a virtual analytics platform, powered by Apache Spark, that allows you to process high volumes of healthcare data from disparate sources and deliver rich insights, resulting in faster innovation and improved patient quality of care.

- Databricks provides **infrastructure on-demand**, allowing you to **scale up and down instantly and automatically**, eliminating sunk infrastructure costs. This allows you to **care for your patients, not for your servers**.
- Cloud-scale ETL **eliminates data bottlenecks**, leaving you to experience order-of-magnitude performance increases over traditional, on-premises solutions.
- Databricks is the **unified platform of the future**. ETL, machine learning, advanced analysis and scalable genomics are available on a single platform with a single interface. Allowing you to **tear down the silos**—data engineers, data scientists can work side by side with first-class support for industry-leading machine learning and statistics frameworks and libraries.

Prominence – Do More With Your Data, Make Healthcare Smarter

The **Prominence Platform** helps over **60 healthcare organizations do more with their data**, including **7 of the top 10 healthcare organizations in the nation**. We help them do more with their data to make healthcare smarter. Prominence provides **36+ pre-built healthcare analytics accelerators** that leverage the Databricks platform to deliver **actionable, governable, and self-service analytics** to the enterprise and enable organizations to do more with their data than ever before.
