

Actionable Analytics: Referral Management

Patient volumes and revenues are down from the COVID-19 pandemic. See how analytics can rapidly get you back to baseline.

Provider organizations have seen a **drop of 50% or more in patient volumes** due to the pandemic. This means patients are **missing out on a critical care for managing emergent problems, chronic conditions, and routine care**—like vaccinations. This has also led to substantial decreases in revenue for health systems. The headwinds for getting back to normal service and care are strong, but can be mitigated.

The Solution: Actionable Analytics

Healthcare organizations that focus on leveraging data will be able to re-engage existing patients, and capture market share from competitors by better addressing the needs and concerns of their populations as whole.

Our team has helped **80+ healthcare organizations** use the data they're already gathering to re-engage patients and acquire new populations. With Prominence Advisors, your organization will gain access to tailored analytics, which will:

- Enable your team to find and retain existing patients.
- Maximize new patient acquisition.
- Leverage data from multiple sources in one dashboard.
- Seamlessly drive workflows through an embedded analytics solution.
