

Informatica Glossary & Catalog Use Cases

Enable Governance in an Epic Environment

Your organization has made a large investment in Epic and in Informatica-- are you making the most of it? Utilize Informatica to enable users to gain insight into trusted Epic data.

Your team needs to be able to find, use, and trust the data in your system. A strong governance foundation, build in collaboration with Prominence Advisors, allows your team to spend their time analyzing their Epic data, not searching for it.

Unlock Your Data

Enhance your catalog with Epic metadata including custom lineage and column-level descriptions.

Reduce Upgrade Impacts

Connect your Epic pipeline to get ahead of field-level changes impacting downstream reporting.

Report Catalog

Onboard your most valuable reports to a glossary and catalog to support use and understanding.

Epic First, Back to Foundation

Stand on the shoulders of Epic and reuse business definitions and calculations.

Fix Reporting Chaos, Scan your EHR

There are a lot of reporting options available across Epic. Enable governance by adding them to your catalog.

Maximize Your Informatica and Epic Investments

Explore how the Prominence team can leverage our experience with other health systems to efficiently maximize your technology investments:

Prominence leverages their expert Epic knowledge to create custom lineage to give your team insight.

Unlock Your Data

Give your team the access to metadata to create reports, fulfill data requests, and support Epic analytics by bringing the Epic metadata to your catalog. Add Epic metadata to your catalog including custom lineage and column-level descriptions.

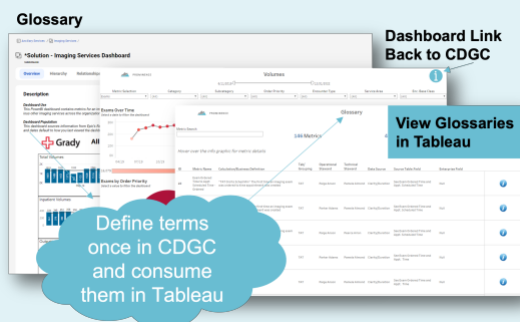

Reduce Upgrade Impacts

Epic is moving all customers to a quarterly or bi-annual upgrade schedule. This increases the frequency in which you need to evaluate the impact of net new and deprecated fields. Use lineage and impact between Epic's reporting databases to decrease the amount of manual effort, time and increase the accuracy of your results.

What Used to Take Weeks
Can Now Take Seconds

Before: 30 Days & 17+ Emails to locate field impacts	After: 5 Seconds to locate field impacts
--	---

Your glossary is your source of truth. Push definitions from the glossary to your analytics tool.

Report Catalog

Data is being merged and widely distributed to support operations across the organization. To ensure integrity and trust, a source of truth data set, reports and set of glossary terms should be created and shared. **Use Informatica to direct users to the right data set and highlight the correct definitions.**

Epic First, Back to Foundation

Stand on the shoulders of Epic and re-use business definitions and calculations to enable comparison to your peers. Provide transparency into the definition to understand how they are defined and where to reference them. Leverage workflow and stewardship functionality to take the work of adoption out of email and Excel to drive tasks, accountability and collaboration.

Import Epic metrics that are used across the organization into Informatica

Name	Type	Description

Fix Reporting Chaos, Scan Your EHR

Every report, dashboard or component in Epic can be seen in Cloud Data Governance and Catalog Tool.

- **Reduce duplicates and proliferation of reports.** Use a catalog to see where objects are referenced in multiple reports or dashboards to offer alternatives or retire duplicates.
- **Provide transparency in definitions:** Use a catalog to track what dashboards and reports are using which Epic metrics. This enables syncing of definitions across reports.
