

# Tableau Cohort Analysis

## Safely Explore Population Data in Tableau.

De-identify patient data in Tableau to enable your team to **easily analyze your cohort.**

Empower your research team with **HIPAA-compliant actionable, safe patient data.**

Filter at a high level, or dig deeper into information like:

### Demographics

- Race
- Age
- Gender
- Smoking Status

### Procedures

- Categories Ordered
- Top CPTs
- Procedures Ordered

### Medications

- Pharmaceutical Class
- Therapeutic Class
- Start and End Time
- Controlled Substances

### Labs

- Orders by Lab Name
- Lab Orders by LOINC Levels
- Orders by Procedure Name

Once you've identified the proper cohort, this application allows you to **safely re-identify your data** to take next steps with your patients.

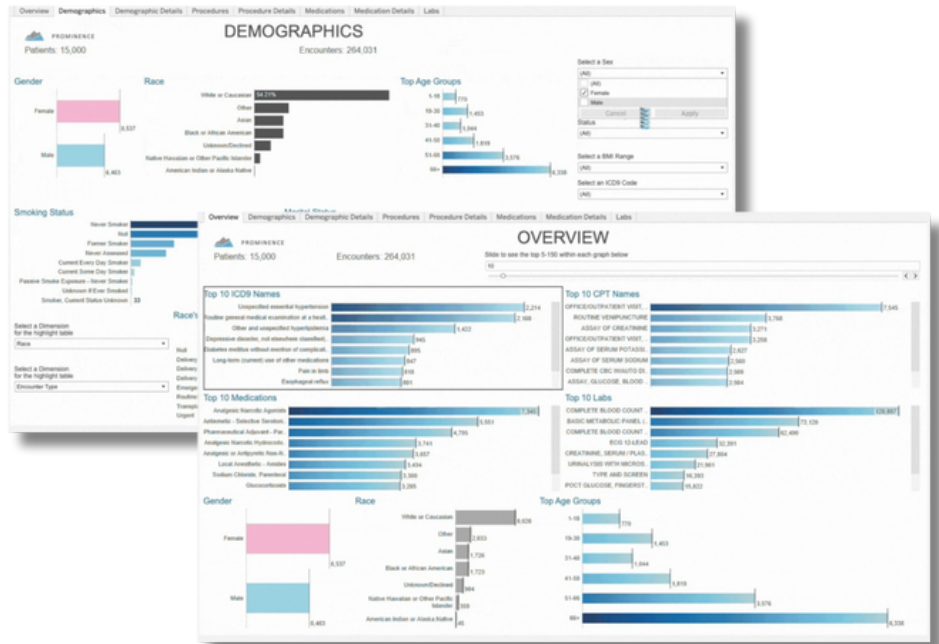

## HIPAA-Compliant Cohort Analysis Embedded in Your EMR

Prominence Advisors can embed Tableau dashboards, like this cohort analysis tool, **into your existing EMR workflows.** In **30 days or less**, your organization can have these dashboards integrated, giving you the power to:

- Access self-service analytics
- Drill-down from Tableau to EMR
- Improve Data Literacy
