

# Claims Normalization

## What Can Claims Normalization Do For You?

Improve your organization's ability to provide proactive, preventative care to the patients you serve.

Proactively manage new payor contracting models.

Build a scalable normalized claims framework in 90 days, starting with CMS claims and expanding to your most important payors.

Although there are transactional standards for electronic data interchange (EDI), the format and structure of claims data vary by payer which makes analysis challenging. Normalizing claims data enables files and formats from various payers to be merged into a foundational layer for analysis and reporting.

### Work with Prominence to

- Accelerate claims normalization by leveraging Prominence's Platform
- Enable insight through visualizing utilization, costs and quality measure through Tableau
- Empower accountability and action by pushing attribution-based views of information
- Deploy quickly and enhance rapidly on top of trusted data

### Enable a single source of truth for claims data enables both clinical and financial benefits:

Population Health Initiatives  
Utilization Trends  
Quality Measures  
Bundled Payment Analysis

Payor Performance  
Risk Management  
Value-based Contracting  
Member Costs

## Project Deliverables
