

Epic Knowledge

Enabling Enterprise Data Catalog

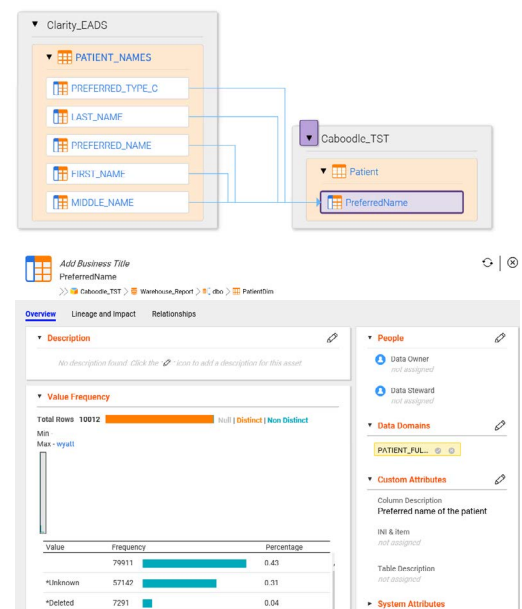

Accelerate the inventory, management and use of your data

Your medical record, Epic, produces hundreds of tables of information and offers a variety of sources for data including a reporting relational database, a data warehouse, Business Object universes and reports and more. In order to harness the power of the data at your fingertips, you need to know where it is, how it was created and what it means. Enterprise Data Catalog gives you the ability to combine all this data in one place and Prominence can help you quickly scan and profile your data and increase adoption of this powerful tool.

At Prominence, we combine our knowledge of EMRs like Epic with our knowledge of analytic tools like Tableau, QlikView, Power BI, Business Objects and the ETL in between to accelerate the implementation and scans of your source systems to create detailed lineage and meaningful content.

Make Your Data Useful

- Quickly scan Epic's relational reporting database, Clarity, Epic's Data Warehouse, Caboodle, and content in Business Objects.
- Create insightful context and metadata by pulling Chronicles INI and Item for Clarity Columns. Display this information as searchable custom attributes in Enterprise Data Catalog.
- Add meaningful metadata by pulling column and table Definitions from Clarity's Data Dictionary and Caboodle's Data Dictionary into asset definition fields or custom attributes.
- Create custom lineage to show the mapping from Clarity to Caboodle in place of Epic's proprietary ETL that is not able to be scanned by Enterprise Data Catalog.
- Tag meaningful, healthcare-relevant data domains within your Epic data environment to more easily direct users to the right data source for their needs.

Additional Considerations

- If you have non-Epic reporting tools in the mix, we're experts in many other platforms like Tableau, Qlik, Hadoop, Spark, SAP, etc. and we can assist you in scanning metadata and/or profiling to build out your Enterprise Data Catalog.
- If you are interested in integration with a business catalog, such as Axon, or a stewardship framework, we can assist you in migrating and linking appropriate content to enable long-term ownership and use.
