

PROMINENCE

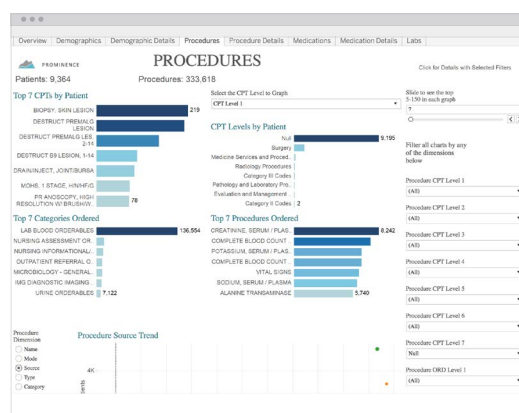

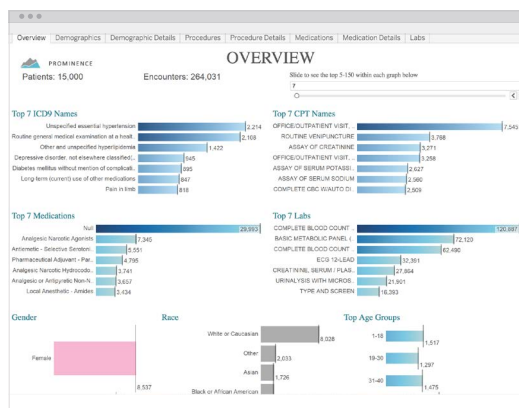

Healthcare, Smarter.

De-identified Cohorts

Research teams require access to data to identify specific patients for studies, complete grant applications and understand patient populations for future organizational growth and coordinating care. However, organizations are overwhelmed with the volume of report requests delaying these critical research needs.

Prominence's de-identified cohort application empowers researchers to perform their own cohort analysis across large volumes of historical patient data, regardless of the technical background of the researcher, and without exposing sensitive patient information.

Researchers are able to use a single application to complete cohort selection through intuitive data exploration, visualization and analysis all prior to IRB approval. The expanded access, and the fact that there is almost no learning curve, allowed one researcher to save over 10 weeks of time on chart abstraction and cohort development.
