Revenue Cycle Performance: Hospital

Revenue Cycle Performance: Hospital is an advanced analytical tool that allows revenue cycle leaders and financial analysts to quickly identify trends and bottlenecks within their hospital revenue cycle, enabling them to understand and address the root causes of performance issues.

By providing timely access to key performance metrics as soon as new data becomes available, trending over time, and alerts to your inbox, decision makers can shift from taking a retrospective analysis of performance to a proactive approach towards managing AR before potential issues have a chance to affect your cash flow.

In an ever increasingly complex reimbursement landscape, having the right information at your fingertips will give you the foundation needed to drive change and succeed in today's healthcare environment and set you up for success in the future.

Metrics include charge and collection trends, claims, accounts receivable, and denials management.

Drill down capabilities to financial class, payor, location, department, provider, and procedure code level for root cause analysis.

Built in comparisons highlight variances from performance targets.

Single source of truth for revenue cycle metrics.
