

PROMINENCE

Healthcare, Smarter.

Sepsis

Sepsis is a leading cause of death and readmissions for inpatient hospitals. The CDC reports that although the overall inpatient hospital death rate decreased from 2000 to 2010, the rate of mortality increased by 17% for patients with a primary diagnosis of Sepsis. Rapid identification and treatment is critical to patient outcomes; a patient's risk of mortality increases up to 8% for every hour treatment is delayed.

Prominence's Sepsis application allows you to track compliance with Sepsis Care Protocols, as well as key outcome measures such as Mortality, Readmissions and Length of Stay.

Track the time to Care Protocols individually, such as the Time to Antibiotic Order and Administration, and as bundles with 3-hour and 6-hour Bundle Compliance.

Analyze time to Care Protocols along with patient outcomes to identify successful best practices and opportunities for improvement.

Validate early recognition of Sepsis patients by using clinical criteria to flag indicators of SIRS, Sepsis, Severe Sepsis and Septic Shock.
