

# Tableau Server

## AWS Quick Start

Get a HIPAA-secure Tableau Server up and running in the cloud in as little as 7 days.

- Launch Tableau on scalable, on-demand cloud infrastructure
- Pay only for what you need
  - No sunk costs on physical infrastructure
  - No physical server to install or administer
  - Scale up or down as needed
- High-availability: AWS 99.99% server uptime guarantee
- Assist in determining if all HIPAA-related requirements are met to federal standards\*
- Prominence will configure and setup end-user access

### Project Deliverables

- Review and Align on your priorities
- Prominence verifies and applies any Quick Start pre-requisites
- Prominence configures and installs the Tableau AWS Quick Start
- Prominence will collaborate with you to set up and test connections to existing data sources
- Prominence configure and setup end-user access
- You're ready for Tableau-driven, self-service analytics in the cloud!

### Additional Considerations

- If you don't have an existing AWS account, we can help you set one up and secure it.
- The Quick Start does not include integrated authentication or SSO, but we can help you implement these if needed.
- The Quick Start does not include integration with an on-premises VPN, but we can help guide you through this process.

\*customers are responsible for validating that final setup of Tableau on AWS meets state and local HIPAA / privacy regulations, and related people/processes are also compliant with each of these laws or regulations.
