

Accelerating Time to Actionable Analytics

Situation

A multi-hospital system was looking to kickstart their BI platform deployment, and their surgical department was prioritized as the greatest need and greatest potential impact for the organization. Current-state reporting **required a full FTE** and reported only on a handful of metrics.

Task

Prominence was engaged based on our history of successful implementations, repeatable implementation methodology, focus on governance and knowledge transfer, and our holistic, pre-built and customizable Accelerator for the OR.

Action

Starting from our implementation methodology and pre-built Accelerator we were able to provide them with a starting point for the more than 80% net-new metrics, a governable set of data transformations and model, and best-practice visualizations.

Our field-proven Surgical Services Accelerator and implementation process guaranteed their success. We brought to the table:

- 127 pre-built, customizable metrics
- Pre-populated metric workbook and definitions
- Scalable and governable data model
- Best-practice visualization to drive action
- Repeatable implementation process
- Knowledge transfer documentation

Results

- **0 ad hoc data requests** to IT in the first month after go-live
- **100% transparency into metrics** which lead to physician engagement vs physician skepticism
- **100% ROI** by freeing up an FTE's worth of time to further their BI platform deployment
- Surgical leaders **use the Accelerator every day**, the hallmark of adoption
