

# Enabling COVID-19 Standard Terminology for Epic

## The Challenge

You are getting requests left and right for analytics to support the tracking of COVID, supplies, ventilators, beds and more across the organization. You are feeling the pain of:

- **Analytics needs and requests dramatically expanding across the enterprise.** Epic is the primary source for much of the data and analytics to support dashboards, reporting and advanced analytics, but requestors also need ERP data, call center data and supply data.
- **Epic is responding quickly to assist their customers with COVID-19 functionality.** This includes new dashboards, workflows, and SUs. They are releasing updates daily with new records, configuration and functionality and you need understand, configure, release and consume the data and new features.
- **Epic is a complex amalgam of 30+ different applications.** COVID is impacting not just one application, but many including registration, clinics, physicians, and coders. This increases the difficulty of effectively enabling enterprise reporting and governance.
- **Epic releases analytics content and therefore definitions and context through a variety of platforms to support the myriad of reporting tools supporting Epic.** There are more than half-a-dozen different places to go for documentation on data, reports, analytics, etc. Much of this data needs to be read and manually pieced together to provide context to consumers of the various reports.

## The Solution

*Prominence Advisors is offering **25 hours of free consulting** and a free 90-day pilot of Informatica's Axon Data Governance application to provide Epic customers with an enterprise glossary of COVID-19 terms and data sets that can be consumed across the enterprise. This will provide a single, consistent and trustworthy source of truth for terminology and data owners.*

Managing the complex and rapidly evolving Epic COVID-19 terminology and ensuring it is universally understood and consistently applied across the healthcare enterprise is a data governance challenge. Prominence Advisors has deep expertise in data governance implementations and best practices, along with detailed knowledge of the Epic application and data ecosystem.

Using Informatica's Axon Data Governance and Enterprise Data Catalog applications, Prominence

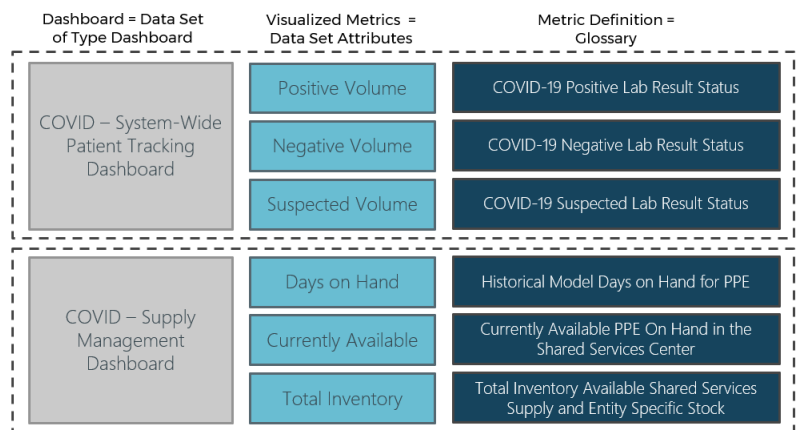

will implement a set of glossary terms and data sets that can be used as the source of truth across the enterprise. With Informatica Axon configured in this way, healthcare organizations can direct users to the right data set and advertise the correct definitions eliminating confusion and wasted time and effort back tracing conflicting and incorrectly used data.

- Exposing definitions and stakeholders in Informatica Axon will increase data literacy and encourage curation of the terms as COVID-19 evolves.
- 25 hours of free consulting gets you to production use of a COVID-19 terminology glossary implemented in Informatica Axon.
- Customers may engage Prominence beyond the 25 free hours to expose lineage in Informatica Enterprise Data Catalog that will provide context and help enable the correct use of data.
- 90-day free pilot license for Informatica Axon Data Governance and Informatica Enterprise Data Catalog deployed on your Azure or AWS for organizations that do not have existing licenses. Prominence would support you during this 90-day period.

## What You Can Expect of Prominence

Our approach is to enable you to more quickly support the usage of standard terms and data sets. To do that we will focus on enabling the consumption of your critical dashboards and glossary terms, whether that is to support command centers, data scientists or ED staff. We will bring the following things to the engagement:

- A framework and Axon structure for onboarding critical dashboards and glossary terms for the organization, relating Glossary terms, Glossary domains, Data Sets, Systems and Attributes.
- Standard COVID glossary terms for your organization to iterate and customize, including:
  - COVID Volumes
  - COVID Labs & Results
  - Visit Volumes
  - Census
  - Ventilator Utilization
- Expertise and guidance for customizing the starter set to fit your organizational needs.
